

Model	Val MAE	Val MSE	Val R^2	Test MAE	Test MSE	Test R^2
Linear Regression	<i>NaN</i>	<i>NaN</i>	1.000000	<i>NaN</i>	<i>NaN</i>	<i>NaN</i>
Random Forest	<i>NaN</i>	<i>NaN</i>	0.819600	<i>NaN</i>	<i>NaN</i>	<i>NaN</i>
Voting Ensemble	25.977099	1442.246223	0.926521	16.218192	369.778471	0.980835
Bayesian Ensemble	0.081580	0.011357	0.999999	0.087236	0.011336	0.999999

- **Linear Regression** achieved *perfect* R^2 but missing MAE/MSE values indicate your pipeline didn't store them.
- **Random Forest** performed moderately well ($R^2 \approx 0.82$).
- **Voting Ensemble** improved performance significantly.
- **Bayesian Ensemble** is **your best model** with near-perfect R^2 and extremely low error values.
